

**Aim: To study different types of layouts and Toast class.**

**Title: Study of different layouts and Toast class.**

❖ **THEORY:**

○ **Layouts:**

1. A layout defines the structure for a user interface in app, such as in an activity.
2. All elements in the layout are built using a hierarchy of View and ViewGroup objects.
3. A View usually draws something the user can see and interact with. Whereas a ViewGroup is an invisible container that defines the layout structure for View and other ViewGroup.
4. The View objects are usually called "widgets" and can be one of many subclasses, such as Button or TextView. The ViewGroup objects are usually called "layouts" can be one of many types that provide a different layout structure, such as LinearLayout or ConstraintLayout .
5. Following are different types of layouts in Android:
  - a. **Linear Layout:** LinearLayout is a view group that aligns all children in a single direction, vertically or horizontally.
  - b. **Relative Layout:** RelativeLayout is a view group that displays child views in relative positions.
  - c. **Table Layout:** TableLayout is a view that groups views into rows and columns.
  - d. **Absolute Layout:** AbsoluteLayout enables you to specify the exact location of its children.
  - e. **Frame Layout:** The FrameLayout is a placeholder on screen that you can use to display a single view.

- f. **List View:** ListView is a view group that displays a list of scrollable items.
- g. **Grid View:** GridView is a ViewGroup that displays items in a two-dimensional, scrollable grid.

- **Toast:**

1. A toast provides simple feedback about an operation in a small popup.
2. It only fills the amount of space required for the message and the current activity remains visible and interactive.
3. Toasts automatically disappear after a timeout.
4. The android.widget.Toast class is the subclass of java.lang.Object class.
5. For e.g.:  
`Toast.makeText(getApplicationContext(),"HelloWorld",Toast.LENGTH_SHORT).show();`

## A) Design a Registration form to show the working of different layout:

- **CODE:**

- **Activity\_main.xml:**

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout_height="match_parent"
tools:context=".MainActivity">

<EditText
    android:id="@+id/divi"
    android:layout_width="wrap_content"
    android:layout_height="48dp"
    android:ems="10"
    android:inputType="textPersonName"
    android:hint="Enter Division"
```

```
app:layout_constraintBottom_toBottomOf="parent"
app:layout_constraintEnd_toEndOf="parent"
app:layout_constraintHorizontal_bias="0.079"
app:layout_constraintStart_toStartOf="parent"
app:layout_constraintTop_toTopOf="parent"
app:layout_constraintVertical_bias="0.609" />
```

```
<EditText
    android:id="@+id/dept"
    android:layout_width="wrap_content"
    android:layout_height="48dp"
    android:ems="10"
    android:inputType="textPersonName"
    android:hint="Enter Department"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintHorizontal_bias="0.079"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent"
    app:layout_constraintVertical_bias="0.484" />
```

```
<EditText
    android:id="@+id/roll"
    android:layout_width="wrap_content"
    android:layout_height="48dp"
    android:ems="10"
    android:inputType="textPersonName"
    android:hint="Enter Roll_No"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintHorizontal_bias="0.079"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent"
    app:layout_constraintVertical_bias="0.367" />
```

```
<EditText
    android:id="@+id/city"
    android:layout_width="wrap_content"
    android:layout_height="48dp"
    android:ems="10"
    android:inputType="textPersonName"
    android:hint="Enter City"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintEnd_toEndOf="parent"
```

```
app:layout_constraintHorizontal_bias="0.079"  
app:layout_constraintStart_toStartOf="parent"  
app:layout_constraintTop_toTopOf="parent"  
app:layout_constraintVertical_bias="0.26" />
```

```
<EditText  
    android:id="@+id/name"  
    android:layout_width="wrap_content"  
    android:layout_height="48dp"  
    android:ems="10"  
    android:inputType="textPersonName"  
    android:hint="Enter Name"  
    app:layout_constraintBottom_toBottomOf="parent"  
    app:layout_constraintEnd_toEndOf="parent"  
    app:layout_constraintHorizontal_bias="0.079"  
    app:layout_constraintStart_toStartOf="parent"  
    app:layout_constraintTop_toTopOf="parent"  
    app:layout_constraintVertical_bias="0.165" />
```

```
<TextView  
    android:id="@+id/textView2"  
    android:layout_width="335dp"  
    android:layout_height="44dp"  
    android:text="REGISTRATION FORM"  
    android:textSize="34sp"  
    app:layout_constraintBottom_toBottomOf="parent"  
    app:layout_constraintEnd_toEndOf="parent"  
    app:layout_constraintStart_toStartOf="parent"  
    app:layout_constraintTop_toTopOf="parent"  
    app:layout_constraintVertical_bias="0.023" />
```

```
<Button  
    android:id="@+id/accept"  
    android:layout_width="139dp"  
    android:layout_height="48dp"  
    android:text="Submit"  
    android:onClick="onClick"  
    app:layout_constraintBottom_toBottomOf="parent"  
    app:layout_constraintEnd_toEndOf="parent"  
    app:layout_constraintStart_toStartOf="parent"  
    app:layout_constraintTop_toTopOf="parent"  
    app:layout_constraintVertical_bias="0.771" />
```

```
</androidx.constraintlayout.widget.ConstraintLayout>
```

- **Activity\_display\_data.xml:**

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"

app:layout_constraintBottom_toBottomOf="parent"
app:layout_constraintEnd_toEndOf="parent"
app:layout_constraintHorizontal_bias="0.498"
app:layout_constraintStart_toStartOf="parent"
app:layout_constraintTop_toTopOf="parent"
app:layout_constraintVertical_bias="0.476" />
```

```
</androidx.constraintlayout.widget.ConstraintLayout>
```

### ○ MainActivity.java:

```
package com.example.practical_1;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.EditText;

public class MainActivity extends AppCompatActivity {
    Button send_button;
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        send_button = (Button) findViewById(R.id.accept);
        EditText object1 = (EditText) findViewById(R.id.name);
        EditText object2 = (EditText) findViewById(R.id.city);
        EditText object3 = (EditText) findViewById(R.id.roll);
        EditText object4 = (EditText) findViewById(R.id.dept);
        EditText object5 = (EditText) findViewById(R.id.divi);

        send_button.setOnClickListener(new View.OnClickListener() {

            @Override
            public void onClick(View v) {
                String name=object1.getText().toString();
                String city=object2.getText().toString();
                String roll=object3.getText().toString();
                String dept=object4.getText().toString();
```

```
String div=object5.getText().toString();
Intent intent = new Intent(getApplicationContext(), DisplayData.class);
intent.putExtra("nam", name);
intent.putExtra("cit", city);
intent.putExtra("ro", roll);
intent.putExtra("dep", dept);
intent.putExtra("di", div);
startActivity(intent);
}

});
}}
```

○ **DisplayData.java:**

```
package com.example.practical_1;
import androidx.appcompat.app.AppCompatActivity;
import android.content.Intent;
import android.os.Bundle;
import android.widget.TextView;
public class DisplayData extends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_display_data);
        TextView name=(TextView)findViewById(R.id.dis_name);
        TextView cit=(TextView)findViewById(R.id.dis_city);
        TextView roll=(TextView)findViewById(R.id.dis_roll);
        TextView dep=(TextView)findViewById(R.id.dis_dep);
        TextView div=(TextView)findViewById(R.id.dis_div);
        Intent intent = getIntent();
        String str1 = intent.getStringExtra("nam");
        name.setText("Name: "+str1);
        String str2 = intent.getStringExtra("cit");
        cit.setText("City: "+str2);
        String str3 = intent.getStringExtra("ro");
        roll.setText("Roll No: "+str3);
        String str4 = intent.getStringExtra("dep");
        dep.setText("Department: "+str4);
        String str5 = intent.getStringExtra("di");
        div.setText("Division: "+str5);
    }
}
```

- OUTPUT:

The image displays two side-by-side smartphone screens showing a registration form. Both screens have a purple header bar with the text "Practical\_1". The status bar at the top of each screen shows the time as 4:27 on the left and 4:28 on the right, along with standard Android icons for signal, battery, and connectivity.

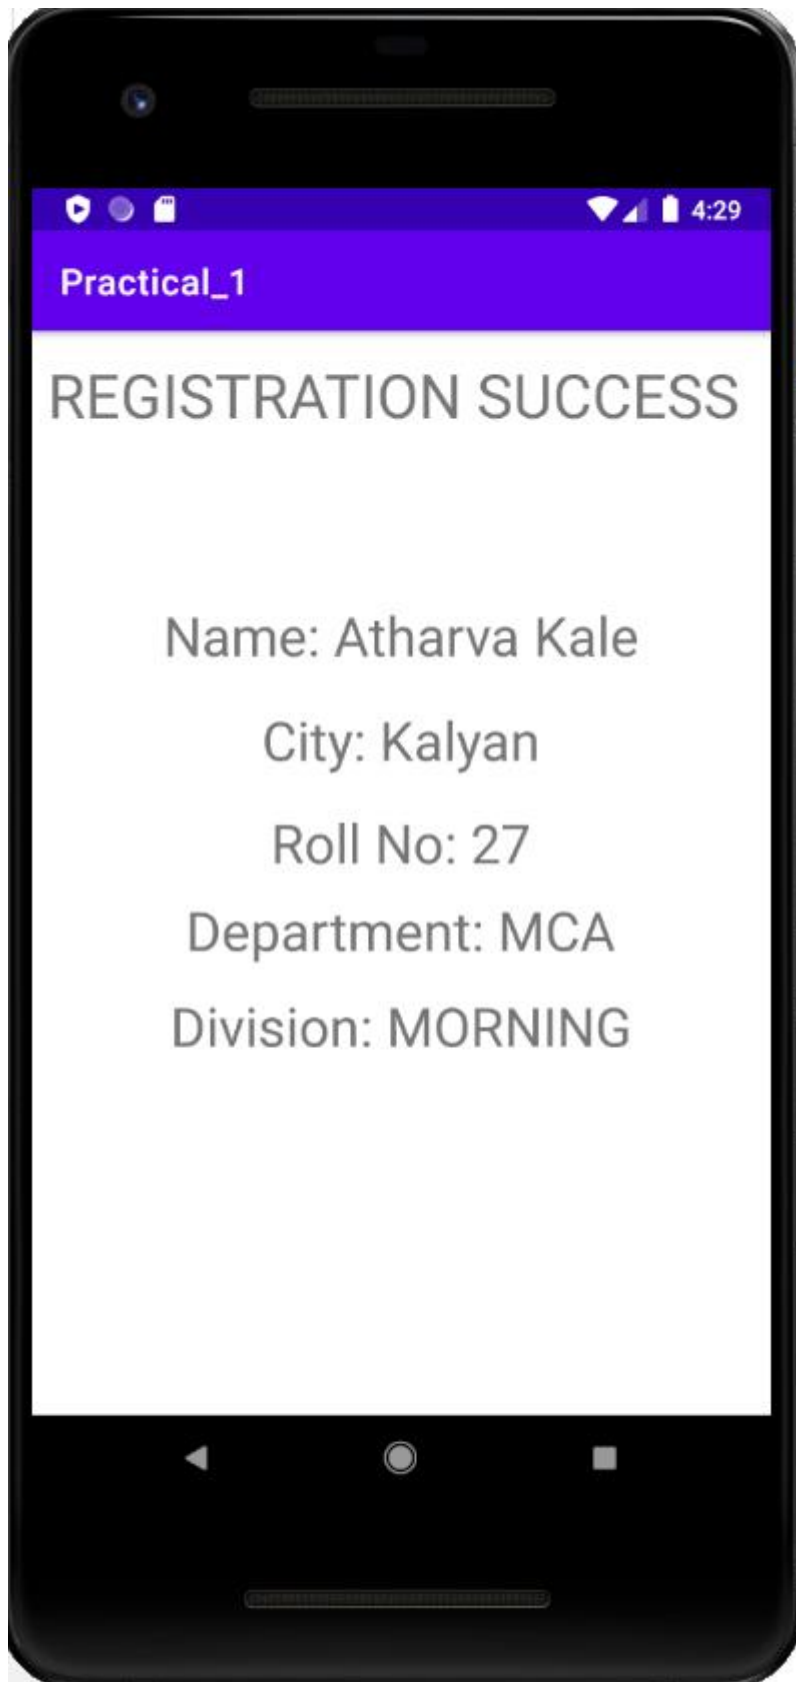

The form is titled "REGISTRATION FORM" in a large, bold, black font. Below the title, there are five input fields, each with a placeholder text "Enter [Field Name]":

- Enter Name
- Enter City
- Enter Roll\_No
- Enter Department
- Enter Division

At the bottom of the form, there is a blue button with the text "SUBMIT".

The left screen shows the form with empty input fields. The right screen shows the form with the following data entered:

- Name: Atharva Kale
- City: Kalyan
- Roll\_No: 27
- Department: MCA
- Division: MORNING

**B) Create an application to design simple calculator to perform addition, subtraction, multiplication and division. Show message for divide by zero error using Toast:**

- **CODE:**

- **Activity\_main.xml:**

```
<?xml version="1.0" encoding="utf-8"?>
<AbsoluteLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <EditText
        android:id="@+id/editText4"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_x="73dp"
        android:layout_y="119dp"
        android:ems="10"
        android:hint="Enter first number"
        android:inputType="numberDecimal"
        tools:layout_editor_absoluteX="101dp"
        tools:layout_editor_absoluteY="87dp" />

    <EditText

        tv2.setText("Value in CentiMeters: "+val*100000);  
    } }  
    );  
}}
```

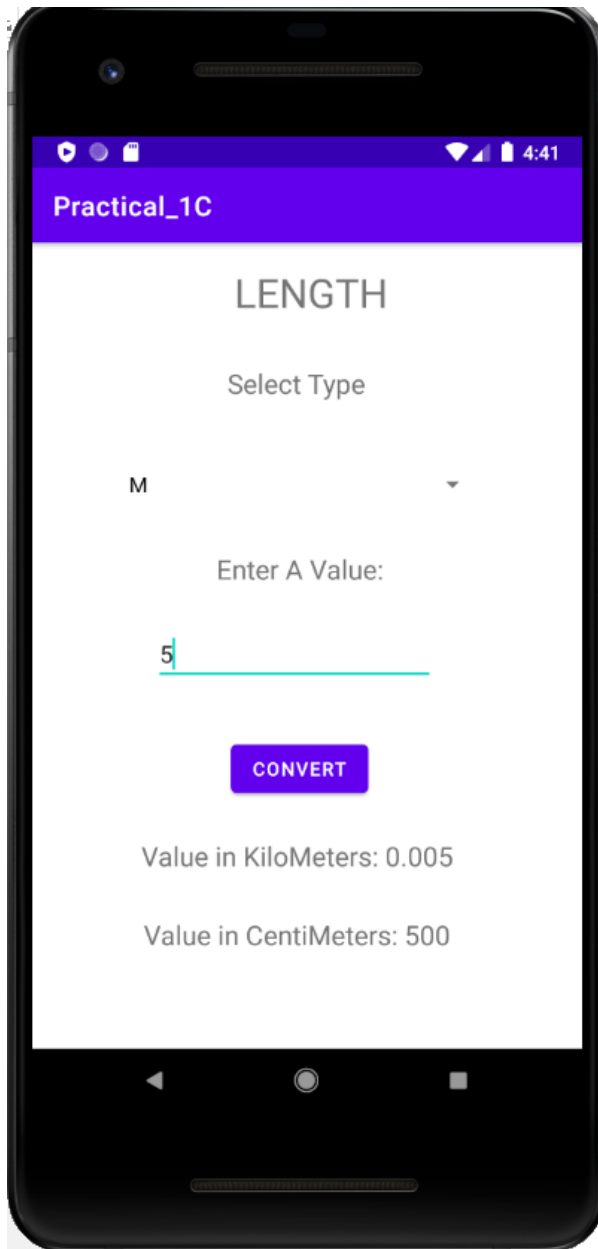

- **OUTPUT:**

- **GUI:**

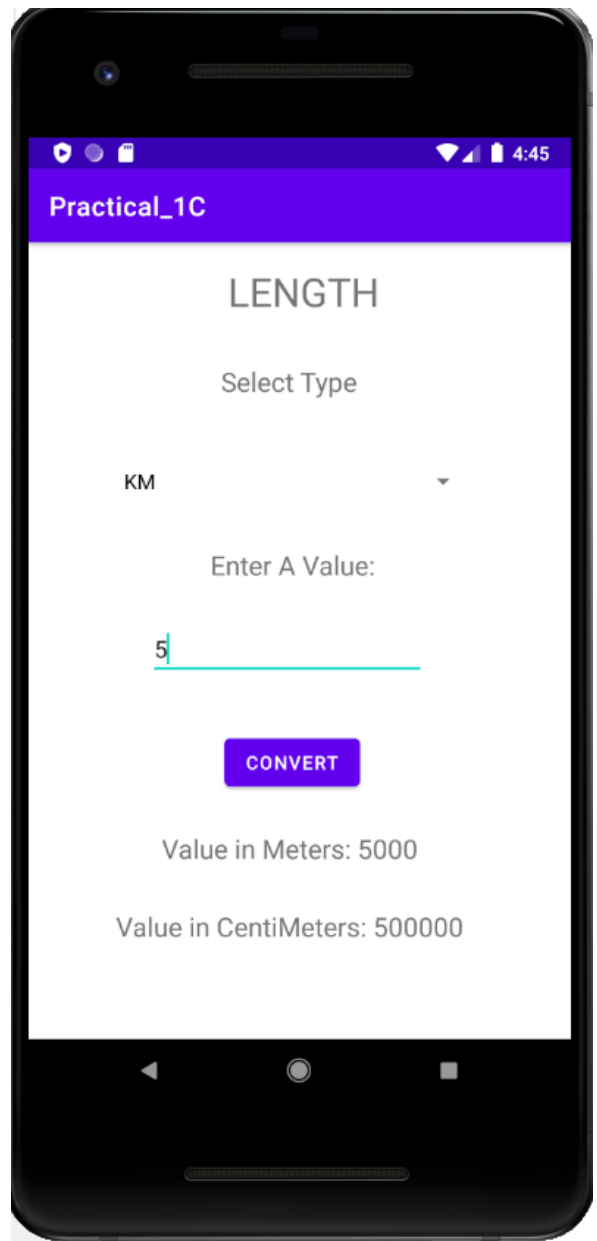

**Centimeter:**

○ Meter:

Kilometer:

### ❖ CONCLUSION:

Hence we successfully studied different types of layouts and Toast class.
